

Telecommunications

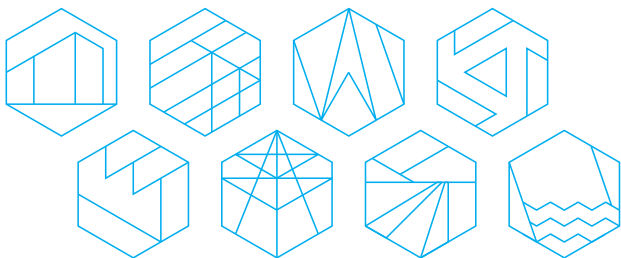

Pride Performance Value

We provide a comprehensive data and communications cabling and network capability for telco networks and commercial and industrial applications.

Manufacturer independent, we work with key cabling and hardware manufacturers installing structured and fibre optic cabling systems including splicing, terminating and testing.

Our experience includes the installation and maintenance of communications infrastructure for national electricity and telecommunications grids. This includes signaling and supervisory control and data acquisition (SCADA).

Telecommunications

Our capability means that we provide comprehensive installation and maintenance services on communications infrastructure for telecommunication networks as well as industrial and commercial customers.

Network Support

Electrix has experience working with structured cabling systems, microwave radio and fibre optic networks and we provide a full suite of maintenance and construction services for all types of networks.

We have extensive experience installing fibre optic cables by both traditional laying methods as well as the more specialised blown fibre work. Our highly trained and experienced team have worked on multi-mode and single mode fibre optic cabling systems and completed a range of internal and external cabling works in various environments.

A highly skilled workforce enables works to be completed within tight timeframes paving the way to commission specialised equipment within allocated timeslots.

Commercial & Industrial Works

One of the key requirements for large projects is good project management skills and the ability to harness the large volumes of data in a meaningful way. Electrix is highly skilled in using project management systems, both its own and customers, and providing quality documentation to support its customers in management of their projects.

Electrix is able to quickly mobilise our highly skilled, national workforce and has experience working in a range of scenarios. We have recruited some of the industry's most experienced operators to allow us to provide a complete end-to-end service to the satisfaction of our growing numbers of customers.

Safety

Safety is paramount across all our operations and safety awareness is embedded in our culture. Electrix is committed to providing a safe work environment for all employees and stakeholders and our highly developed, fully accredited safety management systems are integral to all our business activities.

National Coverage

Electrix has extensive coverage across both Australia and New Zealand to provide our network and commercial customers with the national coverage and expertise they require.

We work closely with all of the major cabling and hardware manufacturers to ensure our employees are highly trained and versed in the latest technologies.

Manufacturer Independent

Electrix is manufacturer independent so we are able to work with all of the major cabling and hardware manufacturers installing structured and fibre optic cabling systems.

Services

- Project management and project documentation skills
- Microwave radio and fibre optic network installation, maintenance and repair
- Multi-mode and single-mode fibre optic cabling systems
- Internal and external cabling works in various environments
- Installation and commissioning of substation telecommunications
- Cable network testing and maintenance
- Communications equipment service and repair
- SCADA network support
- SCADA equipment installation and commissioning
- 24 hour call out service

Internal and external cabling works

Electrix

We are a leading provider of electrical engineering, construction and maintenance services to asset owners in the commercial, infrastructure, utility, industrial and resources sectors.

Our capability means that we are a true end-to-end service partner.

With experience and understanding comes the ability to adapt and innovate and consistently create opportunities to improve efficiency and deliver better outcomes.

The ability to operate in remote locations and across wide geographical areas means we understand and meet the logistical and practical challenges involved with major projects and work programmes.

To each and every engagement we bring our experience and technical expertise along with a commitment to safety, quality, innovation and the environment.
